

Wireless Radio Remote Control

Handheld-Wireless Boom Stick Control for Telehandlers

Features

- Handheld wireless design allows operator to control boom functions from a work platform, roof top, or any strategic location that optimizes visibility for increased safety of load placement or personnel positioning
- Operates all boom functions remotely
- Built-in emergency stop button turns off the forklift engine
- Engine on-off switch for fuel conservation
- Signal protection circuitry for increased reliability and prevention of interference from other radio devices on the jobsite
- Heavy duty, durable design is made to withstand the demands of a construction worksite or industrial applications
- Impact resistant and weather tight allows for use in strenuous environments
- Remote control will replace operator in cab for several applications which accelerates ROI
- 40 continuous hours of operation from industrial strength alkaline batteries
- Built-in sleep mode for power conservation and increased battery life
- Ergonomically designed for operator comfort and ease of use
- Safety engineered transmitter prevents operator from incidental boom movement
- On-board diagnostics for error code interpreting
